CLARKE'S HARDWARE

What you need. How to do it.

Think Spring!

What you need.

Ahh, Springtime in New Hampshire ...and time to think Lawn Care!

Clean Up
To remove winter debris, you'll need rakes, gloves, tarps and heavy-duty bags. Don't forget insect repellent!

Soil Testing
Analyze your soil with an easy home testing kit. The proper ph level will increase the benefits of fertilizer and improve lawn health.

Dethatching and Aerating
This helps soil breathe and allows for proper water and nutrient absorption resulting in a greener, healthier lawn.

Seeding and Fertilizing
Whether plating new seed or improving an existing lawn, you need to nourish it all season long. Our premium grass seed and fertilizers will assure you of the lawn you desire.

How to do it.

Scott's 4-Step Program®
For a simplified system of managing your lawn care, we recommend Scott's 4-Step Program which follows the growing cycle in our area of New Hampshire.

Step 1: Crabgrass Preventer
APPLY DURING APRIL. A blend of nitrogen, potassium and potash will stimulate the grass for a healthy start, plus prevent crabgrass growth.

Step 2: Seed Control
APPLY AS SOON AS WEEDS FIRST APPEAR, usually by the last week of May. It will strengthen the grass while the herbicide tackles and eliminates weeds.

Step 3: Insect Control
APPLY IN MID-JUNE when insects return to the soil. Helps grass survive the summer heat while the added insecticide prevents insects from returning.

Step 4: Winterizer Fertilizer
APPLY IN MID-SEPTEMBER. The adjusted blend of this fertilizer helps strengthen your lawn in preparation for the harsh New England winter.
