

First graders at AE/MS have started to explore educational apps on the 30 iPads that travel around the school building on a mobile cart. During the first week of school, these youngsters were able to make beautiful pieces of pottery, launch rockets solving mathematical equations, and color-by-number pictures, all with the use of an iPad.

In this photo, Kilian Considine and Paige Orcutt are using an app to review numeration and sequential order. During the next few weeks, the students will be using the iPads to enhance their mathematics program and develop their fact fluency.

The iPads were purchased through a combination of grant money and the school budget and are updated regularly by Ms. Unger. In addition, the school has a mobile cart of Chromebooks. Photo and caption: Jen Bent

Proctor Academy's Taylor Methven '16, Carl Hubbard '17, and Cope Makechnie '17, all of whom are former AE/MS Eagles, set sail on September 24 from Gloucester Harbor en route to St. Croix on Proctor Academy's Ocean Classroom, a nine-week journey along the eastern seaboard in a traditional schooner. The Eagles and their classmates will be active crew members in round-the-clock watches as well as studying marine science, maritime literature, history, and navigation. Photo: Scott Allenby

Proctor Academy begins each spring term with Project Period, four days when faculty share their passions and interests with students outside the typical classroom. We are excited about the possibility of including some local talent in our program offerings.

If you have a skill or an interest you would be willing to share with Proctor students or would simply like more information, please contact Patty Pond at PondPa@ProctorAcademy.org.
